

Debloat Your Mac: RemoveMacAI (4,253 Stars)

4,253 stars · MIT · checked 2026-10-11

WHAT IT IS

RemoveMacAI is a free, native C app that debloats macOS by shutting down Apple Intelligence, analytics, ads, and pop-ups. Built by omlahore.

GET IT RUNNING

```
curl -fsSL
https://raw.githubusercontent.com/omlahore/RemoveMacAI/main/install.
sh
| bash -s app
Open Terminal from Applications > Utilities
Paste the command and press Return
If warned about notarization, go to System Settings > Privacy &
Security and click 'Open Anyway'
```

MAKE THESE 3 THINGS

- Disable Apple Intelligence features (Siri, Writing Tools, Genmoji, Image Playground, ChatGPT integrations) and delete their models.
- Stop Mac Analytics, personalized ads, 'Improve Siri and Dictation', and Spotlight internet results.
- Reclaim disk space by deleting old macOS installers, aerial wallpaper videos, Xcode build data, and app caches.

SKIP IT IF

May break third-party AI features (e.g., Adobe Lightroom Denoise) or affect other media players if media key behavior is changed.
