

Critique Your AI Film's Sound with earshot

2,408 stars · MIT · checked 2026-10-23

WHAT IT IS

earshot is a free, CPU-only AI tool that allows agents to listen to, review, and generate sound. Built by Leonxlnx, it gives AI a new sense to understand and create audio.

GET IT RUNNING

```
pip install earshot
earshot describe enter.ogg
earshot critique film.mp4
earshot forge --type 'metallic_click' --frequency 440 --decay 0.2
earshot fit door_creak.mp3
```

MAKE THESE 3 THINGS

- Critique AI-generated film audio against professional standards.
- Generate entire soundscapes and sound effects entirely in code.
- Translate existing audio recordings into editable Python recipe modules.

SKIP IT IF

Users needing GPU acceleration or those who require a fully polished, bug-free experience. Installation might require manual setup for some system dependencies.
